

Technical and Vocational Education and Training

Details

Carl Duisberg Consultants have extensive know-how to respond to needs in the fields of:

- Tailor-made Technical and Vocational Education and Training programmes
- Training needs assessment and labour market research
- Establishment of and assistance to TVET institutions
- Training methodology and instructional technology
- Planning, specification and procurement of equipment
- Training of TVET management staff, teachers and trainers
- Vocational training in the formal and informal sector
- Evaluation of efficiency and relevance of TVET programmes

An extensive network of state-of-the-art vocational training centers and individual experts enables Carl Duisberg Centren to offer specialized training courses in any topic, e.g.:

- Renewable Energies
- Mechatronics/Pneumatics/hydraulics
- Automation Technology
- Plastic Technology
- Electronic Automobile Systems
- Medical Technology
- Food Processing

Carl Duisberg Centren is a non-profit, privately owned, independent German consulting firm operating worldwide in the sphere of vocational education and training as well as project management consultancy.

Services

The scope of our services covers sector studies and the entire project cycle from preliminary site investigations through feasibility studies, detailed designs to project/programme implementation and evaluation.

Clients

Our clients include national governments, major international development organisations, such as GTZ, European Commission, World Bank, Asian Development Bank and private clients.

Personnel

Over the years Carl Duisberg Centren gGmbH has built up a pluri-disciplinary, multinational team of full time employed personnel with a healthy mixture of young, qualified experts and experienced senior staff. In addition, we can draw upon a wide network of international freelance experts, specialised partner institutions and partner firms, which enables us to mobilise the right expertise for every task.

Education and Training: Technical and Vocational Education and Training (TVET)

Availability of an appropriately skilled labour force is a prerequisite for economic development. The role of TVET is to respond to demands in the labour market and to impart individuals with the necessary skills and knowledge to become productive members of society. The key to success in TVET is co-operation between potential employers, training institutions, governments and representatives of the labour force to ensure that actual needs are being met and that financing can be secured. To make this happen Carl Duisberg Centren Consultants can draw on its experience of the German „Dual System“ for vocational training as well as from experience in the many countries in which it has carried out TVET projects.
